Telemetry Recording

In version 1.2 on PC, Le Mans Ultimate has added native, in-game telemetry recording which exports to a DuckDB file.

Setting up telemetry recording

You can either set up telemetry to record automatically in "gameplay" settings or map a button to start recording in your control bindings - there is not one set by default.

Configuring channel recordings

In UserData/Telemetry you can find a config.json file. You can configure this file in order to remove some channels/events from the list of recorded data or increase/decrease their frequency but this may have some performance implications.

An example config.json is listed below:

```
{
  "Channels": {
    "Ambient Temperature": {
      "Frequency": 1,
      "Name": "Ambient Temperature"
    },

Inspecting duckdb data

From this link you can download a duckdb extension [DuckDB CLI | MotherDuck Docs](#)

Extract the downloaded version, open a terminal and run `duckdb -ui`

Your browser should then open automatically a new tab with the duckdb viewer from where you can load the telemetry data.
